Research Interests

- Explainable artificial intelligence
- Data Science on complex networks, large scale graph analysis
- Nonparametric statistics, bootstrap on graphs
- Deep learning and graph mining on Blockchain networks
- Machine learning for privacy and security research on online social networks
- Topological data analysis

Education

Honors and Awards

- ◊ Fulbright Scholar to USA, 2008-2010.
- ◊ Amazon Web Services Research Grant, 2013.
- ◊ NSF travel award for SAMSI at Duke University, 2017.
- ◊ IBM travel award for SIGKDD, July 2010.
- ◊ IEEE travel award for ICDM, December 2012.
- ◊ Graduated as an honor student from Karadeniz Technical University, 2007.

Work Experience

2019 July - Current	University of Manitoba ◊ <i>Assistant Professor at Computer Science and Statistics</i> ◊ <i>Faculty at Data Science Nexus</i>
2016 Oct - 2019 June	University of Texas at Dallas ◊ <i>Postdoctoral Fellow at Computer Science and Statistics</i> ◊ <i>Joint work: Murat Kantarcioglu (CS) and Yulia Gel (Stat.)</i>
2015 Jun - 2016 Oct	Huawei Research, Istanbul, Turkey ◊ <i>Research Engineer. Intelligent Search Group</i>
2014 Feb - 2014 Aug	Qatar Computing Research Institute (QCRI), Qatar ◊ <i>Research Associate. Data Analytics Group</i>

Internships

2012 Jun-Aug	Yahoo! Research Barcelona ◊ <i>Advisor: Francesco Bonchi</i>
2005 July-Aug	University of Cairo, Cairo, Egypt ◊ <i>IAESTE Student Program</i>

Grants

Internal grants

- **FoS 2021-2022:** With Xuemiao Hao from Actuaries, A Comprehensive Analysis of Use Cases and Application Domains of Blockchain in Insurance, Interdisciplinary Research Grant of UManitoba.

External grants

- **Research Manitoba Health Council 2021-2023:** with Carson Leung and Protegra Inc. Bonafide: A Novel Protocol and Software Infrastructure for Improving Online Information Sharing and Control.
- **MITACS 2021-2022:** with Carson Leung and Protegra Inc. Bonafide: A Novel Protocol and Software Infrastructure for Improving Online Information Sharing and Control. Mitacs Accelerate.
- **NSERC 2020-2025:** NSERC discovery grant with an additional supplement for early researchers.
- ◊ **CANSSI 2021:** With Dorcas Ofori-Boateng, Postdoctoral Research Full Fellowship from the Canadian Statistical Sciences Institute (2020-2021).

SELECTED PROJECTS

CoinWorks: Graph Analysis for the Blockchain Technology

One of the first groups to analyze Blockchain graphs, at UT Dallas we introduced a novel concept of k-chainlets on Bitcoin that expands the ideas of motifs and graphlets to Blockchain graphs. Chainlet analysis provides a deeper insight into local topological properties of the Blockchain and the role of those local higher-order topologies in the Bitcoin price formation. In the entire history of the Bitcoin graph, we have found that certain types of chainlets have a high predictive utility for Bitcoin prices. So far, this ongoing project has resulted in three concluded publications. Further works are actively being developed.

Aetas: Temporal Rules Discovery for Web Data Cleaning

In a collaboration with MIT CSAIL, at the Qatar Computing Research Institute we developed Aetas, a system for the discovery of approximate temporal functional dependencies. We used the data provided by RecordedFuture.com, which crawls the Internet and extracts knowledge with an event oriented approach. At

the core of the system are two modules that exploit machine learning techniques to identify approximate dependencies and their duration from noisy web data. Our results appeared in the VLDB 2015 conference.

Sight: Personalized privacy for social networks

To protect personal data in Online Social Networks (OSNs) against well-known privacy problems, several relationship-based access control mechanisms have been proposed, as well as, more expressive privacy settings have been adopted by commercial OSNs, like Facebook. Unfortunately, these efforts can be unproductive, because users are reluctant to set complex privacy preferences. To overcome this problem, we proposed a new model for privacy preference settings based on a risk concept. Our findings were presented at the IRI 2011, ICDE 2012 and ICDM 2012.

Taoss: Trend Analysis on Open Source Software

Started as a Turkish Research Council project at Huawei Research, Taoss aimed at modeling the open source landscape by analyzing software repositories (e.g., Github), Q&A sites (e.g., StackOverflow), online forums (e.g., HackerNews) and other web sources. Taoss is internally deployed by Huawei as an analysis tool in planning software projects.

Crowd-Sourced Sensing and Collaboration Using Twitter

We designed and implemented crowd-sourced sensing over Twitter, and showcased our system with two applications: a crowd-sourced weather radar, and a participatory noise-mapping application. In the project, we proposed a SensorML based classification for future detection of sensors on Twitter. Findings of this project were published in WOWMOM, 2010.

Upinion: Identifying Breaking Points in Public Opinion

While polls are traditionally used for observing public opinion, they provide a point snapshot, not a continuum. We considered the problem of identifying breakpoints in public opinion, and proposed using micro-blogging sites to capture trends in public opinion. This, to the best of our knowledge, is the first paper to employ an emotion corpus to classify emotion changes. We used a combination of vector space and set space models to represent and analyze tweets from Twitter about public opinion on two breaking news stories.
